

Q: What is informational balancing?

A: Informational balancing can be considered analogous to fixing a software bug – making a small change to a batch of information (software code) in order to effect a large change (transforming a non-working software program into a working program) in a matter of seconds. CoRe Inergetix™ dramatically reduces the time needed to find the ‘bug’ by indicating and uncovering in seconds the unexpected influences on a client’s condition, which may come from lifestyle, musculoskeletal, emotional or attitudinal issues, for example.

To return for a moment to the effectiveness of pure information without the addition of energy, we can continue the analogy of the software bug and consider that increasing the voltage to the computer will not fix the bug, and may in fact damage it. In contrast, the correct informational ‘fix’ can not harm anything.

Most imbalances arise on the informational level. This can be understood in a general way if we consider that an idea or opinion is behind and determines any action. Informational balancing can have profound effects on causes that lie on the informational level, such as the control functions of the body and mental-emotional issues. Because the four levels are inter-connected, work on the informational level can also indirectly affect issues that appear on the energetic, biochemical, and structural levels. For example, if hunched shoulders originate from fear, this apparently structural issue can be balanced via the informational level. Adding the energetic modality to the CoRe Inergetix™ System allows us to directly address conditions that may be best affected via the energetic level by using light, sound, electricity and magnetism as carriers of client- and condition-specific information.

Q: Can you say something about the connectedness of the different levels (structural, biochemical, energetic, informational) and how CoRe affects other levels?

A: The energetic level takes the information and creates changes which may produce biochemical changes, which may in turn change the tissues of the structural level. All balancing via remedy trays is informational. If the imbalance is on the informational level, then the informational balancing is what is most helpful. Because the informational level is also connected with the structural level, the biochemical level, and the energetic levels, then informational balancing can indirectly affect the other levels. What appears to be a structural issue can be resolved via the informational level if that is where its main component lies – think of hunched shoulders which originate from fear (taking a hunched, defensive posture). Somebody using an exercise by moving their legs is working structurally (developing leg muscles, for example) and perhaps helping energy move. If you take a vitamin by swallowing it, you are working on the biochemical level and that too connects to other levels. Maybe there is plenty of that vitamin in the body, but if the information necessary to process it is missing then the information is what is needed. Remember that quantity is irrelevant on the informational level, so it’s not a case of not enough vitamin B information. Analogies can help us to better understand the

informational level – fixing a software bug can be achieved by a small change to information (and not by turning up the power supply) and that has a big effect – it makes the program function again. It can take a long time to find a software bug, but CoRe finds the issue quickly.

Q: Does the CoRe System work on specific medical conditions?

A: Remember that CoRe Inergetix™ works only on the informational or energetic levels, which means on either that level of existence on which things are related via ideas, concepts, forms and pattern, or on the level on which physical energies are needed. In many cases the body has all the potential to heal itself but is blocked on an informational level, it lacks so to speak the ‘know-how’, and then balancing with CoRe Inergetix™ will be surprisingly effective, where maybe years of physical therapies or supplementation did nothing.

Q: Does the CoRe use specific frequencies for treatment?

A: Informational balancing does not work with frequencies or vibrations of any kind of energy, but uses information which is transformed into a pattern for transmission. You can enter frequencies or rates, just like any other concept that can be put into words or numbers, to be transmitted informationally.

Q: Does CoRe Inergetix™ do balancing the same way other informational devices do it?

A: Yes. In informational balancing, a symbolic representation is created of the object you want to balance, be it an organ, an emotion, a disease or a whole person. This symbolic object is then mathematically synchronized with a symbolic representation of a remedy; this works a change on the informational level and is helpful if the problem originates on the informational level.

Q: I’ve been treated by practitioners that use electro-dermal screening techniques and there are a lot of devices on the market (BEST, AVATAR, ACUPRO, etc), but they all seem to be a new version of the old model. Are they reliable?

A: BEST, AVATAR and ACUPRO are all based on the application of an electric point probe and thus the readings are depending on various factors, humidity of the skin, applied pressure, probe-size and shape, angle of application, how often a particular point has already been used for measurement and so on. Keeping all these parameters somewhat constant depends on much experience and can only be somewhat compensated for by the device using spring-mounting of the probe, humidity compensation, a pressure gauge and so on.

However the single most important parameter is the speed of application of the probe; that is something the manufacturers do not tell you because there is no way to compensate for it via the device. For this reason I consider EAV to be subjective to a large extent and for that reason blind-testing studies with EAV have never shown convincing results.

Q: In Germany Dr. Lechner proposes his ScaSys System based on Scalar wave, what do you think about it?

A: The ScaSys uses an electric loop that supposedly transmits remedy information to the client via scalar waves and the testing is then done with traditional kinesiology. What the company is not telling you is how they produce scalar waves, which certainly all high tech physicists would wish to discover as they are said to be space-invariant, which means they do not need any time to traverse space and they are not deflected by matter. This would certainly be the ideal carrier wave for any kind of mass media communications and if Dr. Lechner or others who say they have found a way to produce it and modulate it with some complex remedy information would give out their secrets they could get billions and would not have to earn their money so hard on the alternative health market!

Q: I read about two methods which seem interesting: Thermography (CRT 2000) and Acuvision. The first is based on skin temperature measurement after thermal stress, the second on degree of luminescence from an acupoint without pressure or other influence (sweat, etc). What is your opinion and what do you suggest?

A: There have been many attempts to measure meridian points in an other than electric fashion, as everyone who is trying to work with electric probes objectively soon realizes that they are not physical measuring instruments in the regular sense. To use heat emanation (Thermography) is one way, to use Kirlian luminescence is another; both have similarly not proven to be reproducible, but maybe new technologies will prove to be. Also, for both technologies, no solid pool of experimental data has been collected for interpretation without ambiguity. My advice is to try out a given device and see if it is giving somewhat reproducible and intelligent results.

Q: Isn't the CoRe just another bioresonance device like the QXCI?

A: First of all the QXCI is not a bioresonance device as is claimed by the manufacturer; it has no circuitry to receive any data from the patient, it is not making a "handshake" with the patient as is said, it is not testing millions of parameters via an actual electric link with the patient. Opening the box will show anyone with only the slightest understanding

of electrical circuitry that there are no functional electric circuits inside, but only an assortment of randomly selected parts. Yes, the lights are working, and they show only the status of the parallel interface of the computer, nothing more. The harness is connected directly with the output of a regular soundcard speaker and therefore one can measure some random electrical signal on it if one takes an oscilloscope; however if one runs for example the “Rife-Function” of the program, no corresponding frequencies will be measured at the harness. Therefore the QXCI is a well-marketed, age-old radionics device with a colorful graphic surface.

Q: What is your opinion about bioresonance devices such as Medisend Super and Medisend Super II by Dr. Ludwig.

A: First of all, I used to have a Medisend Super II. It is vastly inferior when compared with the CoRe. Second, bioresonance, different from pure radionics (or the QXCI), has a working circuitry that inverts incoming signals from the client and outputs them back to him. The idea came about when Morell and Rasche, two people from Germany, came in contact with Scientology and Ron Hubbard’s E-Meter and thought about ways to improve it; this is how MORELL-RASCHE-Therapy (MORA-Therapy) was born; others like BICOM, AMS, Kindling, etc. came later as copycats. Bioresonance has certainly helped a lot of people, however the question of whether this is due to an informational effect or if complex client information can in fact be inverted by a \$10 circuitry, which basically simply makes a phase shift, cannot be answered; however I have heard from practitioners that they got results which were just as good when they forgot to turn on the power or to plug in one of the electrodes.

Q: Is the treatment with the CoRe System faster and more accurate than electrodermal screening? For example, you have a patient with multiple food allergies, parasites, dental foci plus candida and perhaps burdens from an old flu infection and drugs used in excess.

A: Before I began using the CoRe Inergetix™ I used the BodyScan by Phazx in addition to kinesiology. We could scan about 250 – 300 remedies by poking someone’s finger or wearing out their arm with muscle testing. I do not do that anymore. Imagine, how could you even come close to testing over 100,000 remedies with EAV or muscle testing – and this is how many there are available with the standard CoRe Inergetix™ database. Also, instead of poking a patient’s finger with the point probe or pushing their arm hundreds of times, now you have time to discuss the results which come up on the screen.

Q: Any system that gives diagnostic results which are real would be even better if it ranked them by their importance. And even better yet if it had protocols available to treat anything that shows up and monitored the progress from treatment to treatment. Some systems on the market can do this. What about the CoRe System?

A: You say a system “should give diagnostic results which are real”. For some people the question of what is real and what is not is a very simple one; for me however, in respect to clients and illness, it is not so clear. To me, concepts like you mentioned such as dental foci, parasites, food intolerances, multiple allergies, etc. are more possible gateways to understanding the real situation of the client, any one or any combination of the above can do that.

Yes, the CoRe System, like all the others, will alert you to these kinds of things and 100,000 more. Viewed together and in conjunction with the filter function of the CoRe System will give enormous insight into the patient’s situation. But taken on face value alone, and isolated from the rest, this can lead you just as quickly into dead ends.

However in real practice I take a good history first and then use the CoRe System to clarify and connect the dots. Different than other systems, informational devices like the CoRe System can do a broadcast which is often surprisingly effective if the cause of the illness is on the informational level.

Computerized informational devices are usually quite a challenge for some people who are used to doing just EAV/EDS testing or testing with something like kinesiology, because they confront the user with such a number of possible healing remedies and modalities that they either face the challenge by constantly trying to learn more or just give up.

When you do any form of one-by-one testing as you do in muscle testing, you have only a very limited number of things you can test, things you have put together more or less from your personal preferences – so test results are never as surprising as when you use a system like the CoRe – have you for example tested all the remedies that come up with the CoRe for something like depression? With the CoRe the few ‘top’ items you do see are usually only a fraction of perhaps several hundred items in the group(s) selected.

The CoRe System is a hybrid of an informational and energetic balancing system and a traditional knowledge base for natural medicine. You can do informational scans of the whole database just as you can in other systems like the QXCI or Quantec, or you can limit your scan and analysis to a given symptom or disease so that you will only rank remedies that have indicated that they are useful in this respect

Q: What is CoRe actually doing with the frequencies?

A: Radionic systems and homeopathy say they basically treat with frequencies, but this is untrue. You cannot hold a frequency meter next to a homeopathic remedy and measure something – that is what led to problems with established physics. They are using modern day scientific language and can not prove there are frequencies – because it is not energetic. Radionics and homeopathy are purely informational (note that below a certain potency, there is a tiny biochemical element to a homeopathic remedy).

CoRe Inergetix™ provides the frequencies in a recognized physical form of energy like electricity, light and sound. These physical entities (electricity, light, sound) are modulated with frequencies.

The best way to transmit energy from the System to a person depends on personal receptivity. Some people react to light, some to electricity, and some to sound. We use all these different channels. We are trying to find a way to transmit energy.

Informational balancing or repatterning is transmitting energy in a different way. Talking is sound + information energy. Humans formulate ideas to transmit energy; when we speak, we hear sound as well as receive information, and we translate this into new ideas and actions. Resonance is a possible avenue through which to transmit energy.

Most important is the medium used – ie, the light, or electricity, or sound. Next most important is the actual frequency, which is the time aspect of it (the medium is modulated 100 times per second if the frequency broadcast is 100 Hz). This is the quantity aspect of the whole problem of transmitting energy.

Rife said he killed germs. There are lots of theories about frequencies. Nobody really knows what is happening. We do not have the conventional Rife approach of saying it kills things inside of you. It stimulates something, a reaction towards health. The main function of that is the immune system. We only know that for 50 years people saw incredible results if they had the right frequency. The CoRe Inergetix™ System is really holistic because it is not based on the idea that we are killing things (like antibiotics do, and Rife people say they do) – we are not saying we are killing anything (we are stimulating recovery), and also because we are not saying there is one frequency that will work for everyone – it must be a personalized frequency, which the CoRe system can find through the resonant frequencies mode and the biofeedback mode.

Q: How do I find my personal frequency?

A: Every person is a group of different thoughts and feelings and parts of the body. A person's being is made up of many things, resonant frequencies, body parts, blockages, etc – not just one thing. We can't find or have one frequency for the whole body. CoRe can find your resonant frequencies; in its Biofeedback Mode, it finds the single most resonant frequency within the parameters you choose and then broadcasts that frequency. When that frequency has been broadcast, it analyzes again and finds the single most resonant frequency in that moment, and then broadcasts that one – there is not one constantly most-resonant frequency.

Q: Can you say something about resonance and frequencies?

A: If you resonate to all frequency ranges everywhere, that's perfect DLE (Dynamic Labile Equilibrium). Where you can't resonate is not DLE.

If you want to work on energetic blocks, find a frequency you can feel a little bit, and work with that one and over time you will become sensitive to it (as in voice training, you learn to hear a frequency).

A blockage is an incapacity to resonate. Reasons for non-resonance include having an energetic blockage or, just the opposite, someone is so electrically transparent (conductive) that they do not obstruct the flow of current and therefore don't feel anything. To use an analogy of a flowing river – either you are a rock fixed in the river bed and don't feel the flow, or you are a reed that is not attached to the river bed that flows around and gives no resistance to the flow – it is totally passive to the flow; neither is in the DLE. A reed that is attached to the river bed but moves back and forth with the current is in the DLE.

The disease-specific frequencies, which CoRe and other devices have, are not necessarily resonant, but CoRe's resonant frequencies are different – CoRe uses informational analysis to find the frequencies that resonate for the client and their symptoms. Resonance doesn't mean you are already feeling it; resonance means it's an important issue for you. Resonance doesn't mean you already have it, you may not have it. Maybe you need it, or you don't.
